1 Subject area:

The AI in digital health based on IoT and cyber-physical system.

2 Aim:

The best goal is make another way to public health based on AI by using IoT, which it facilitate real-time big data analytics; and it have a possibility to forecasting a health state in future by means of digital health.

3 Arguments:

Everything related to human health; It is important!

4 Objectives:

* Preliminary ideas :

- Provide the basic tools "software + hardware" to start of implementation the project.
- Must be studied the physiological state of the human being.
- Must be read related paper of health system.
- Do a general search on health monitoring systems based on AI and IoT and extend the idea.
- Get started a work with doing the planning.

Note: These are just initial thoughts.
